

Maths Bridging Course 2025

The Bridging Course modules have been specifically designed to cover the prerequisite knowledge required to undertake the following First-Year maths courses:

- Mathematics and Applications 1 (MATH1003) or Discrete Mathematical Models (MATH1005/MATH6005)
- Mathematics and Applications 1 (MATH1013)
- Advanced Mathematics and Applications 1 (MATH1115)
- Mathematical Foundations for Actuarial Studies (MATH1113)

There are 3 separate Bridging Modules that will run from early January to early February 2025. They range in cost between \$500-600 and run for 8-9 days.

Students who later enrol in a mathematics course at the ANU, can apply for a refund of AUD \$100 per module by contacting the Bridging Course administrator.

Who should enrol in the Bridging Course modules?

Students who are required to take one of the First-Year maths courses above as part of their degree program, but who do not have the prerequisite knowledge, are required to complete one or more of the bridging modules. Students who have the prerequisites but would like to refresh their knowledge, are welcome to enrol in the bridging modules.

Please note: It is mandatory for students to complete the diagnostic test prior to enrolling in any of the Bridging Modules.
